PROFESSIONAL SUMMARY

Information Technology graduate with hands-on exposure across IT support, software development, data and AI, cybersecurity, cloud fundamentals, and technical project operations. Completed a 420-hour co-op at Smart Methods, contributing to troubleshooting, testing, deployment, data processing, and secure web and AI workflows across four commercial products. Strong foundation in Python, SQL, Windows/Linux, networking, REST APIs, data analysis, security principles, Agile/Scrum, and technical documentation. Seeking entry-level technology roles where broad technical skills, problem solving, and fast learning can add value.

PROFESSIONAL EXPERIENCE

IT Co-op Intern

June 2025 - August 2025

Smart Methods Company

- Completed an intensive 420-hour technical training program covering web systems, NLP and data processing, troubleshooting, system configuration, security best practices, and deployment workflows.
- Assisted in testing, debugging, and deploying source code and features across 4 commercial software products, supporting reliable operation, data quality, and secure authentication workflows.
- Collaborated with cross-functional Agile teams to troubleshoot technical issues, track deliverables, document requirements, and improve overall system quality.

EDUCATION

Bachelor of Information Technology

Aug 2021 - June 2026

Qassim University, College of Computer | GPA: 4.02 / 5

Relevant Coursework: Data Structures, Algorithms, Database Systems, Computer Networks, Information Security & Privacy, Software Engineering, Data Mining & Storage, Machine Learning, Systems Analysis & Design.

PROJECTS

Solar Energy Forecasting System - Graduation Project & Hackathon

2025 - 2026

Python, TensorFlow, Keras, Pandas, Streamlit

- Developed an end-to-end deep learning forecasting system using LSTM, GRU, and CNN-LSTM models with NASA POWER and K.A.CARE datasets, including preprocessing, feature engineering, and model evaluation.
- Built and deployed a Streamlit dashboard for predictive analytics, supporting data integrity, visualization, usability, and technical troubleshooting.

Automated Cars Service System - Software Engineering Project

2024

Agile/Scrum, UML, SRS/SDD, AES, MFA, RBAC

- Co-developed a smart ride-booking and car service platform, documenting functional requirements, data flows, system architecture, and UML diagrams.
- Applied AES encryption, Multi-Factor Authentication, role-based access concepts, and Agile sprint practices to support secure and maintainable delivery.

ACHIEVEMENTS

- 1st Place - Innovation Incubator Hackathon, Qassim University | 2026: Secured first place in the first stage for Wahaj Forecast, a SaaS solar forecasting platform using deep learning to support renewable energy decisions.

TECHNICAL SKILLS

IT Support & Systems: Hardware & Software Troubleshooting, Helpdesk & User Support, Windows/Linux Administration, System Configuration, TCP/IP, DNS, VPN, Active Directory Fundamentals

Software & Development: Python, Java, C++, JavaScript, HTML5, CSS3, SQL, RESTful APIs, OOP, Git/GitHub, Postman, Docker Fundamentals

Data & AI: Pandas, NumPy, TensorFlow, Keras, Scikit-learn, LSTM, GRU, CNN-LSTM, NLP, Data Preprocessing, Feature Engineering, Data Visualization

Cybersecurity: Information Security & Privacy, Network Defense Fundamentals, AES, MFA, RBAC, Vulnerability Assessment, Wireshark Fundamentals, Security Log Analysis

Cloud & Project: AWS/Azure Concepts, Web Application Hosting, Agile/Scrum, SDLC, SRS/SDD Documentation, UML, Jira/Trello Basics

SOFT SKILLS

Problem Solving, Analytical Thinking, Teamwork & Collaboration, Communication, Adaptability, Time Management, Fast Learning

LANGUAGES

- Arabic - Native
- English - Professional Working Proficiency
